

Report on Groundwater Accessibility and its Potential Contamination
Source in India Held on 26.06.2021

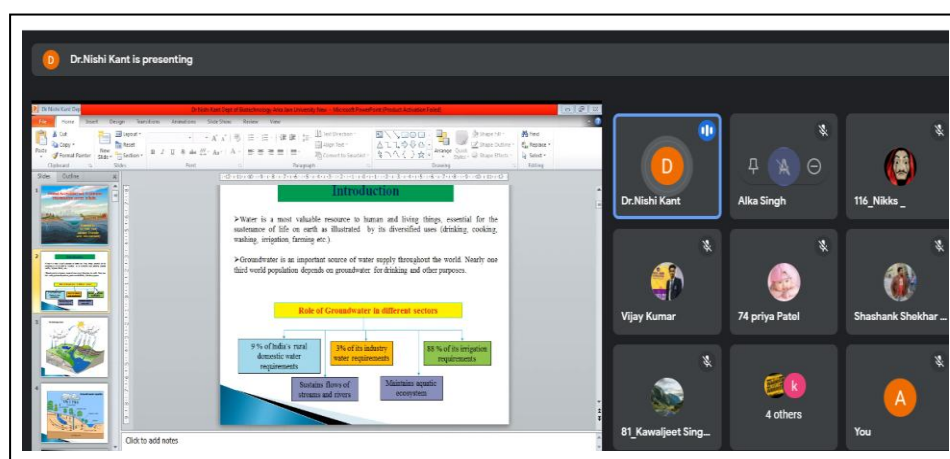

Date of Event	26.06.2021
Name and Type of Event	Webinar on Groundwater Accessibility and its Potential Contamination Source in India
Conducted by	Ms. Divya Paikaray, Prof. Arvind Kumar Pandey
No. Of Participant	69

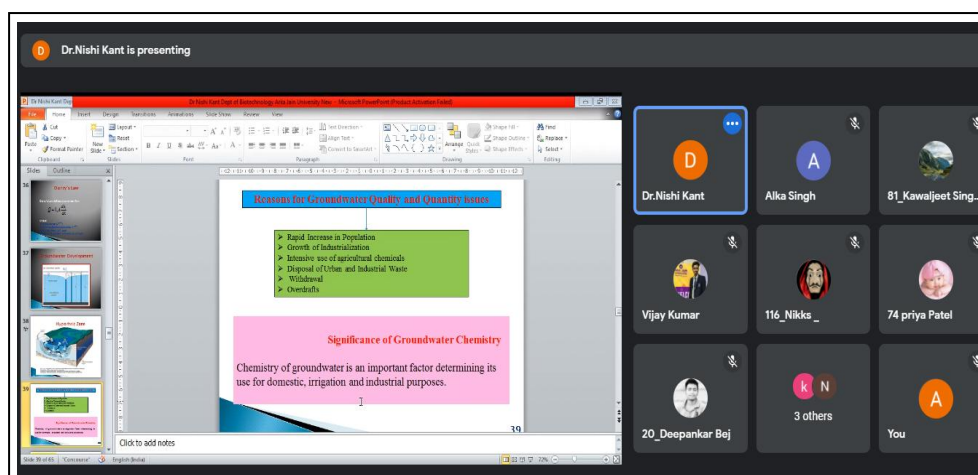

A one day Webinar on ***Groundwater Accessibility and its Potential Contamination Source in India*** was organized on 26.06.2021 via Google Form which was being coordinated by Ms. Divya Paikaray, Prof. Arvind Kumar Pandey, Head of CS and IT Department. Dr Nishi Kant has given webinar on the topic **“Groundwater Accessibility and its possible contamination source in India.”** She highlighted these basic points in her presentation: With nearly 70% of water contaminated, India ranks 120th of 122 countries in a global water quality index, the report noted. India holds about 4% of global freshwater and 16% of its population. The crucial role groundwater plays as a decentralized source of drinking water for millions rural and urban families cannot be overstated. According to some estimates, it accounts for nearly 80 per cent of the rural domestic water needs, and 50 per cent of the urban water needs in India. Groundwater is generally less susceptible to contamination and pollution when compared to surface water bodies. Also, the natural impurities in rainwater, which replenishes groundwater systems, get removed while infiltrating through soil strata. But, in India, where groundwater is used intensively for irrigation and industrial purposes, a variety of land and water-based human activities are causing pollution of this precious resource. Its over-exploitation is causing aquifer contamination in certain instances; while in certain others its unscientific development with insufficient knowledge of groundwater flow dynamic and geo-hydro chemical processes has led to its mineralization. Students actively participated in the event and help to make the event successful.
