**Panel Discussion on-Block chain as Good Governance Technology**

**Objective :** Reporting Reality, Creating Awareness

**Description & Flow of Events (including photos of the Event)**

NEWS Society of School of Commerce and Management organised its third event on August 28, 2021. The program started with the lightening of the lamp. Next, took place the panel discussion on “Block chain as Good Governance Technology”. The event took place in an interesting way and the participants came to know a lot many things about Block Chain technology. Block chain is a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system. It is essentially a digital ledger of transactions that is duplicated and distributed across the entire network of computer systems on the block chain. It is associated with cryptocurrencies like bitcoin and others. Block chain might seem complicated, and it definitely can be, but its core concept is really quite simple. A block chain is a type of database. Thus, it was concluded that, Block chain is a relative new technology and is revolutionary. It will make life simpler and safer, changing the way in which personal informations are stored and how transactions for goods and services are made. Block chain technology creates a permanent and immutable record of every transaction. This impenetrable digital ledger makes fraud, hacking, data theft, and information loss impossible.
