

## Report on Need of Decrease in Environmental Pollution A Speech Competition At Jamshedpur Public School Held On 23rd June 2022

Date of Event	23 <sup>rd</sup> June 2022
Name and Type of Event	Need Of Decrease In Environmental Pollution A Speech Competition At Jamshedpur Pblic School
Conducted by	SCHOOL OF PHARMACY, ARKA JAIN University
No. Of Participant	68
	Skill Development

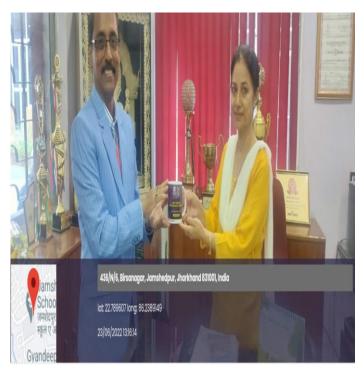

Reducing pollutants in the air is important for human health and the environment. Poor air quality has harmful effects on human health, particularly the respiratory and cardiovascular systems.

At the community level, one can reduce air pollutants by choosing to walk, cycle or take public transport rather than drive a vehicle of his own. One can also keep the vehicle in good condition and drive to reduce fuel consumption and minimize emissions.

One can buy items that have low-energy manufacture and use requirements, or which can be recycled. Good urban design and planning can also reduce pollution by having cleaner, 'greener' choices for the public. These may include increasing walking and cycling paths and having urban 'hubs' where people work, play and shop locally, reducing their need to travel. Industries can use pollution control devices to remove pollutants by absorbing, filtering, diluting or dispersing them. Government licensing and regulation are effective ways to minimize emissions from industry. Some of the most common devices used to control industrial pollution are Cyclone separator, electrostatic precipitator, bag filters, packed bed wet scrubber etc. The importance of pollution has significant impacts on human health, the environment, and even on how some of the Earth's systems, such as the climate, are functioning. Pollution touches all parts of the planet. It is affecting our health through the food we eat, the water we drink and the air we breathe. Environmental pollution is not a new phenomenon, yet it remains the world's greatest problem facing humanity, and the leading environmental causes of morbidity and mortality. Man's activities through urbanization, industrialization, mining, and exploration are at the forefront of global environmental pollution. Both developed and developing nations share this burden together, though awareness and stricter laws in developed countries have contributed to a larger extent in protecting their environment. Despite the global attention towards pollution, the impact is still being felt due to its severe long-term consequences. We are discussing, making awareness effort since two decades back but somewhere the effort is lacking and no successful result is observed. Still the effort should not be given up. With a positive intention School of Pharmacy has started to ignite younger minds through many kind of efforts and this time through a speech competition so that a message can be spread to the upcoming generation regarding the importance of environment and its protection. For this School of Pharmacy has selected the senior secondary students of Jamshedpur Public School. Few faculty members along with few students of School of Pharmacy visited to Jamshedpur Public School on 23<sup>rd</sup> June 2022 at 11:30 am with the prior permission from the Honorable Principal of the School Mrs. Namita Agarwal. There the school students participated in the Speech Competition and delivered their views on the topic NEED OF DECREASE IN ENVIRONMENTAL POLLUTION. The best five students are awarded with a token of appreciation. The teachers and the other members of the school coperated and appreciated the effort and wishes their gratitude and expected the sustainibility of such kind of awareness efforts.

Finally the event was ended with the speech of Dr. Jyotirmaya Sahoo, Dean, School of Pharmacy. He advised the students that everyone should take the oath to protect the environment by any means possible for them. Meeting was ended with National Anthem.
