Free Cataract Screening Camp at Burudih Village 2023

| | |
|----------------------------|--|
| Date of Event | 17.06.2023 |
| Name of the Event | Free Cataract Screening Camp: To observe cataract awareness month – June 2023 |
| Type of the Event | An Outreach Extension Activity |
| Conducted by | Department of Optometry |
| No. of Participants | 16 |

OBJECTIVE:

The primary objective of the event was to offer free eye examinations to the residents of Burudih village, situated in the Saraikela Kharsawan district, while simultaneously raising awareness about cataracts and their impact on daily life. This initiative aimed to reach out to an underserved community and provide essential eye care services, particularly during the month of June, designated for cataract awareness.

ABOUT THE EVENT:

The eye examination camp was a collaborative effort between the Department of Optometry at ARKA JAIN University, ASG Eye Hospital in Sakchi, and the NSS (National Service Scheme) cell of the university. The event was conducted at a healthcare center in Burudih village, which served as the campsite for the outreach program.

PARTICIPATION:

A total of 110 residents from Burudih village participated in the screening camp. The collaborative effort of these institutions was instrumental in making the event a success.

EVENT HIGHLIGHTS:

Vision Assessment: The event began with comprehensive vision assessments for all participants. This initial screening helped identify individuals with vision problems, allowing for timely interventions.

Refraction Services: Refraction services were provided to determine the need for prescription glasses. Correcting refractive errors can significantly improve an individual's quality of life by enhancing their visual clarity.

Cataract Screening and Grading: Special attention was given to cataract screening and grading. Cataracts were identified and categorized based on their severity, enabling appropriate follow-up and intervention for affected individuals.

Blood Pressure and Blood Sugar Measurements: In addition to eye-related services, the camp also included blood pressure and blood sugar measurements. This holistic approach aimed to identify potential health issues that could affect eye health.

Referrals and Community Assistance: ASG Eye Hospital played a crucial role in providing referrals for individuals requiring further medical attention. The NSS cell of the university facilitated the gathering of the community at the healthcare center, ensuring smooth operations during the camp.

TAKEAWAYS (OUTCOMES):

Cataract Awareness: One of the primary outcomes of the event was raising awareness about cataracts and their implications. Many residents were unaware that vision loss due to cataracts can be temporary and reversible with appropriate treatment.

Community Education: The event helped educate the community about eye health and the available services for the treatment of various eye conditions. This knowledge empowers individuals to seek timely eye care.

Accessibility to Healthcare: The camp addressed the issue of accessibility to healthcare services, especially for the older population who may have difficulty traveling to larger cities for medical care. Such camps play a vital role in bridging this gap.

Healthcare Schemes and Treatment Options: Participants were informed about various healthcare schemes and treatment options available for cataracts. This information ensures that individuals are aware of the support available to them.

CONCLUSION: The Free Eye Examination and Cataract Awareness Camp organized by ARKA JAIN University, ASG Eye Hospital, and the NSS cell served as a valuable initiative to promote eye health in an underserved community. The event not only provided essential eye care services but also imparted knowledge that can lead to improved eye health outcomes and a better quality of life for the residents of Burudih village.
