**Myopia Vision Screening Camp**

<b>Date of Event</b>	<b>05.07.2025</b>
<b>Name of the Event</b>	<b>Myopia Vision Screening Camp</b>
<b>Type of the Event</b>	<b>Outreach Extension Activity</b>
<b>Conducted by</b>	<b>Mr. Pranab Das, Department of Optometry in collaboration with Unnat Bharat Abhiyan, NSS and IKSHANA Club, ARKA JAIN University</b>
<b>No. Of Student's Participants</b>	<b>08</b>

**OBJECTIVE:**

The Department of Optometry, Arka Jain University, in association with the National Service Scheme (NSS), conducted a Myopia Vision Screening Camp on 05th July 2025 at S.S + High School, Gamharia. The key objective of the camp was to identify early signs of myopia (nearsightedness) among school children and to raise awareness about its progression, prevention, and management. The initiative focused on educating students and teachers about the growing concern of childhood myopia and the importance of timely intervention through regular eye screenings.

The camp received active support from students, school staff, NSS, Ikshana Club, Unnat Bharat Abhiyan volunteers, and a skilled team of optometrists from Arka Jain University. Through detailed vision assessments and screenings, several students were identified with uncorrected refractive errors, particularly myopia. The event served as a significant step towards community outreach, reinforcing the need for early detection and lifestyle awareness to reduce long-term visual complications in the younger population.

**DETAILS:**

The Department of Optometry, School of Allied Health Sciences successfully organized the myopia vision screening camp. The day began with our team's journey to S.S High School, Ghamharia, where we arrived and reported at 10:00 AM. It took approximately 30 minutes to set up the arrangements for the eye screening camp. The program commenced with a short orientation speech by Mr. Sarbojeet Goswami, who addressed the students on the importance of optometry as a profession. His talk included insights into the field of optometry, career opportunities after completing 10+2, the academic curriculum involved, and reasons why one might consider choosing optometry over other career paths.

Following the orientation, the eye screening program was conducted by Pranab Das, during which 80 participants were examined individually. A standard battery of tests was employed, including case history taking, visual acuity assessment, torchlight examination, static retinoscopy, and subjective refraction. Subjective refraction results were used to determine the refractive error status of each participant. All medical findings were systematically recorded in the Outreach Activity Register of Arka Jain

University, which was brought back to the campus for further review and documentation. The camp concluded at 2:30 PM, after which all instruments were carefully packed and returned to the university.

### **TAKEAWAY (OUTCOMES):**

Our recent eye screening camp, conducted at the school premises, was a resounding success and served as a vital reminder of the importance of early detection and timely intervention in children's eye health. The camp aimed to identify undiagnosed visual problems among school-going children—many of whom were unaware of their vision needs and had never undergone a comprehensive eye check-up before. Through a structured screening process carried out by trained optometrists, several cases of refractive errors and other ocular conditions were identified. Each child those found to have a vision issue was provided with personalized feedback, along with detailed referrals and guidance to ensure they receive appropriate follow-up care. Beyond individual assessments, the camp served a broader purpose: it acted as a platform for community awareness and health education, encouraging parents, teachers, and students to recognize the value of routine eye exams. The success of the camp also strengthened our commitment to making preventive eye care accessible, especially in school environments where early habits are formed.

By initiating such outreach activities, we are taking meaningful steps toward ensuring every child has the opportunity to see clearly and succeed. These efforts are critical not only for enhancing educational outcomes but also for building a healthier, more informed community. As we continue to expand our screening programs and partnerships, we remain focused on protecting the visual health of future generations and integrating eye care into the broader landscape of child health and development.
